#### ABSTRACT

This report and its companion, volume II, provide a snapshot of people experiencing homelessness in Minnesota. The information is intended as a resource for planners, policymakers, service providers, and others addressing the problems associated with homelessness. Findings are based on interviews with 638 men and 685 women in shelters, transitional housing programs, and on the street. Weightings of the sample are used to describe the characteristics of 2,470 adults and 1,007 children identified as homeless in Minnesota on October 27, 1994. The total number of homeless and precariously housed persons in Minnesota on this day was estimated at 12,415. Of these, a disproportionate number were members of minority groups. Women and children represent the fastest growing segment of the homeless population, and the total number of children experiencing homelessness in Minnesota, especially in the metropolitan area, has risen dramatically. Fifty percent of the homeless adults interviewed had no more than one of the identified potential barriers to employment, representing a decline in the number of homeless persons with more than one barrier to employment. Four appendixes provide detailed information on homelessness, including six detailed tables of information on homelessness. (Contains 120 tables.) (SLD)

### PROJECT STAFF

Greg Owen, Ph. D., Project Director

Greg is a Consulting Scientist at Wilder Research Center and directed the Center's first study of St. Paul's homeless population in 1984. He is responsible for overall project coordination and the preparation of this report.

June Heineman, Research Associate

June coordinates Wilder's work with shelter providers and volunteers and prepared the final data tables for this report. June also prepared the personal accounts presented here.

Carol Zierman, Research Associate

Carol coordinated the youth survey (reported separately) and assisted with interviewer coordination, data preparation, analysis and report writing.

Scott Parks, Research Analyst

Scott conducted the data analysis activities for the statewide study including sample weightings, initial table preparation and statistical summaries.

#### **ACKNOWLEDGEMENTS**

The second statewide survey of persons without permanent shelter would not have been successful without the help of many contributors. Funding was provided by the Minnesota Housing Finance Agency, the Family Housing Fund of Minneapolis and St. Paul, the Minnesota Department of Human Services, the Minnesota Department of Economic Security, and the Wilder Foundation. Help to plan and carry out the work was provided by volunteers and staff from the agencies identified above and from the Minnesota Coalition for the Homeless, the Minnesota Department of Education, The Reundtable on Youth Without Permanent Shelter, and the American Indian Housing Corporation.

Sue Watlov Phillips and Val Baertlein of the Minnesota Coalition for the Homeless encouraged service providers and volunteers to participate.

Pat Leary and Judy Johnson from the Minnesota Department of Economic Security helped identify sites throughout the state where homeless people could be found and provided historical data from the Department's quarterly shelter counts.

Housing Finance Commissioner Kit Hadley, former Commissioner Jim Solem, as well as staff members Denise Rogers and Brenda Nieland helped bring state and local agencies together to collaborate on the study.

Dave Schultz, Jerry Storck and Suzanne Guttsen from the Minnesota Department of Human Services consulted on health and service questions.

In addition to those named above, there were many who helped with the design of the survey including: Senator Eilen Anderson, Shirley Anderson, Val Baertlein, Bobbi Butler, Betty Christenson, Alicia Herrera, Judy Johnson, Pat Leary, Nancy Nagler, Judy Olson, Earl Renneke, Denise Rogers, Dave Schultz, Sue Watlov Phillips, and Vicki Ybanez.

Gordan Thayer and Judy Olson helped organize and coordinate research efforts among American Indian people in Minneapolis.

Information on housing assistance requests at Community Action Programs (CAP's) and Community Action Councils (CAC's) was gathered by staff members in these programs throughout Minnesota. Their help is greatly appreciated.

Wilder Research Center staff members Marilyn Conrad, Louann Graham and Darlene Zappa prepared this document and many other WRC staff served as site leaders and interviewers. Dan Mueller provided helpful comments on earlier drafts of this report. Members of the Minnesota

-ii-

Coalition for the Homeless and individuals from many other agencies and voluntary associations served as site leaders, coordinators and interviewers for our survey effort. The statewide training leaders include: Shirley J. Anderson, Mark Barta, Joan Batson, Betsy Christenson, Shirley Conway, Phil Cooper, Mary Farley, Sadie Green, Carol Grimm, Cheryl Hanks, Mary Jimmerson, Barb Monsey and Christy Ward.

The Minnesota Satellite Technology Center provided the facilities and staff for our statewide training efforts. Minnesota's Technical Colleges provided training space and additional technical support throughout the state including sites in: Anoka, Bemidji, Brainerd, Detroit Lakes, Duluth, Granite Falls, Brooklyn Park, Hibbing-North Campus, Mankato-Extension, Minneapolis, Moorhead, Rochester, St. Cloud, St. Paul, Willmar, and East Grand Forks.

None of this would have been possible without the cooperation of more than 1,400 study respondents who answered questions and described their personal experiences in shelters, transitional programs, drop-in centers, on the streets and in other locations. Our report is dedicated to them.

### **EXECUTIVE SUMMARY**

The findings reported here are based on interviews with <u>638</u> men and <u>685</u> women conducted in emergency shelters, battered women's shelters, transitional housing programs, and on the street on October 27, 1994 (see Appendix I for survey locations). The analysis uses weightings of the sample (see Appendix II) in order to describe the characteristics of 2,470 adults and 1.007 children identified on this date. The study represents a snapshot of the population of persons in Minnesota experiencing homelessness on a single day in 1994.

#### **KEY FINDINGS**

- On October 27, 1994 there were 1,092 men, 1,237 women, 1,761 children and 100 unaccompanied youth residing in temporary housing programs in Minnesota. In addition, 330 persons were identified in non-shelter locations. The total, 4,520, represents a 51 percent increase over the number of persons found in temporary housing programs three years earlier (October 24, 1991). The number of available beds in temporary housing programs also increased by slightly more than 50 percent during this time period.
- The number of emergency shelters and battered women's shelters has remained relatively stable since the last statewide survey (October, 1991), but the number of transitional housing programs has increased by 54 percent from (41 to 63).
- The estimate for the total number of homeless and precariously housed persons in Minnesota on October 27, 1994 is 12,415. This includes estimates of those who are "doubled-up" with others, living on the streets, or residing in shelter or non-shelter locations.
- Consistent with previous studies, the homeless population contains a disproportionate number of persons of color, particularly African Americans in the Metro Area and American Indians in Greater Minnesota.
- Persons of color are not equally distributed throughout the state's temporary housing programs. African American's make up the majority of persons in Metro Area emergency shelters while whites represent the majority of persons in Metro Area transitional programs. This difference, first observed in the 1991 survey, also holds true in 1994.
- From 1991 to 1994, the percentage of employed homeless persons rose from 19 percent to 25 percent. In 1991, 8 percent had full-time jobs compared to 13 percent in 1994.

- Women and children represent the fastest growing segment of the homeless population. Sixty-five percent of women in temporary housing programs on October 27, 1994 had one or more children with them at the time of the survey. The majority of children (55%) were staying in transitional housing programs. The total number of children experiencing homelessness in Minnesota has increased dramatically since 1985 (518 percent in the Metro Area and 385 percent in Greater Minnesota.)
- The most common single reason for women to seek temporary shelter in Minnesota is to flee an abusive partner. Twenty-five percent of the women in this study indicate that one of the main reasons for leaving their last housing was to flee abuse.
- An examination of barriers to employment shows that 50 percent of the homeless adults interviewed in 1994 have no more than one of the potential barriers included in the survey. In 1991, 39 percent of homeless adults had one or no barriers to employment. This represents a decline in the number of homeless persons with more than one barrier to employment.
- Persons interviewed in non-shelter locations are predominantly male (78%) and have often been homeless for more than one year (45%). American Indians make *cp* 31 percent of those interviewed in non-shelter locations.
- Those who are homeless in Minnesota have often had difficult starts in life. In fact, 46 percent of all adults in the present study were either abused as children, had a child before the age 18, or lived in a foster home or treatment facility as a youth.
- The vast majority of those experiencing homelessness in Minnesota (89 percent in the Metro Area and 92 percent in Greater Minnesota) report that their temporary housing arrangements are "reasonably safe."

### INTRODUCTION

The purpose of this report is to provide a current snapshot of people experiencing homelessness in Minnesota. The information is intended as a resource for planners, policy makers, service providers and others who are interested in addressing the problems associated with homelessness.

The information presented in this report comes from three main sources:

- 1. A statewide population count of all persons residing in emergency shelters, battered women's shelters and transitional housing facilities on the night of October 27, 1994.
- 2. A statewide survey of a sample of persons living in emergency shelters, battered women's shelters and transitional housing facilities on October 27, 1994.
- 3. A surv $\epsilon_J$  of homeless adults found in outdoor locations on October 27, 1994.

In addition to the data sources listed above, the report also provides comparisons to U.S. Census information, statewide shelter counts and previous survey results. A second report based on a survey of homeless youth in shelters and other locations conducted on the same date as the adult survey, is also available from Wilder Research Center.

#### BACKGROUND

The study was commissioned by the Minnesota Interagency Task Force on Homelessness in order to provide information for statewide planning efforts to reduce homelessness. Agency representatives from state and local government, Wilder Research Center, the Minnesota Coalition for the Homeless and other non-profit groups met during the spring and summer of 1994 to develop survey instruments and research methods. Additional financial support was received from the Family Housing Fund of Minneapolis and St. Paul to enable researchers to reimburse study respondents for their participation. Training sites and strategies were developed in

In addition to the survey results reported here, a companion study of persons seeking housing assistance from Community Action Programs and Councils (CAP's and CAC's) was conducted during October 1994. Results of this study are presented in Appendix IV.

-1- 23

conjunction with the Minnesota Satellite Technology Center and Minnesota's Technical College system. Survey dates were set by the planning group, and temporary housing program sites were identified by staff of Wilder Research Center and the Minnesota Department of Economic Security.

### **METHODS**

On October 25, 1994 more than 370 volunteers assembled in classrooms at 16 vocational colleges around the state to learn how to conduct face-to-face interviews with homeless people. Training was conducted via an interactive satellite television broadcast originating in St. Paul. Site leaders, identified by Wilder Research Center and the Minnesota Coalition for the Homeless, provided direction for volunteer interviewers at each of the training sites.

On October 27, 1994, volunteer interviewers and site leaders went to 136 different provider agencies in 39 cities and 20 street locations in 11 cities to interview homeless people throughout Minnesota. Most interviews were conducted during the early evening hours. A complete listing of all sites included in the survey is presented in Appendix I.

In Greater Minnesota site leaders were instructed to interview every adult available at a given site at the time of the study team's visit. In large shelters in the Metro Area (over 50 adults), we randomly sampled one-third of the adult residents; at sites with between 20 to 50 adults we randomly sampled one-half of the adult residents; and at sites with fewer than 20 adults we attempted to interview all adult residents.<sup>2</sup> At youth shelters, youth transitional housing programs and youth drop-in centers v.e attempted to interview everyone available at the time of the study team's visit. Overall, approximately half of all adults staying in emergency shelters, battered women's shelters and transitional housing facilities were interviewed. Respondents received a cash compensation (\$5.00) for the half-hour it took to complete the interview.

Homelessness was defined using the same criteria used by the United States Congress in allocating resources through the McKinney Act (P.L. 100-77, sec 103(2)(1), 101 stat. 485 [1987]).

Where samples were drawn, respondents were randomly selected using tottery system. Everyone available at the site at the time the survey team arrived was given a number and these numbers were drawn until the sampling quota was met at each site.

-2-

The term "homeless" or "homeless individual" includes an individual who (1) lacks a fixed, regular, and adequate nighttime residence and (2) has a primary nighttime residence that is (a) a supervised, publicly or privately operated shelter designed to provide temporary living accommodations (including welfare hotels, congregate shelters, and transitional housing for the mentally ill), (b) an institution that provides a temporary residence for individuals intended to be institutionalized, or (c) a public or private place not designed for, or ordinarily used as, a regular sleeping accommodation for human beings.

Homeless youth were defined as follows:

Youth who currently have no parental, substitute, foster or institutional home to which they can safely go. They are unaccompanied by an adult and have spent at least one night either in a formal emergency shelter, improvised shelter, doubled-up, or on the street.<sup>3</sup>

While the survey was nearly comprehensive in sampling from emergency shelters, battered women's shelters, youth shelters and transitional housing facilities, it was not feasible to "sweep" the state for homeless persons in non-shelter locations. Therefore, a purposive sample of persons in approximately 20 street locations in 11 cities in various parts of Minnesota was obtained by persons experienced in outreach to the homeless. This was not an exhaustive effort and cannot be considered a comprehensive count or a representative sample of non-sheltered homeless persons. It does, however, provide the basis for preliminary descriptive information on this population.

Finally, a purposive sample of unaccompanied homeless youth was obtained through the efforts of youth advocates throughout Minnesota. Youth were interviewed in 15 street locations and drop-in centers. Results of this survey are presented in a separate youth report.

Supporting information for this study was obtained from two additional sources. First, shelter providers at all emergency shelters, battered women's shelters, youth shelters and transitional housing facilities provided a complete count of all men, women and children and unaccompanied youth in residence on the night of October 27, 1994. No comparable counts were available for unsheltered youth or adults. Second, information obtained from those seeking housing assistance from CAP and CAC agencies throughout Minnesota was collected during the month of October and is reported in Appendix IV.

-3-

Components of this definition are described in <u>Homeless Children and Youth</u>, (ed.) J. Kryder-Coe, et al., (New Brunswick, NJ: Transaction Publishers, 1991), pg. 34-35.

Finally, in order to avoid bias associated with over or underrepresenting individuals in any of the shelters, a weighting technique was applied to the sample. Weightings were possible only in locations where complete population counts were available (adult emergency shelters, battered women's shelters, and transitional housing facilities). The weighting techniques (described in Appendix II) allow us to estimate the characteristics of nearly the entire population counted in each type of facility on October 27.4

### HOW MANY HOMELESS?

The following table shows the total count of homeless persons in emergency shelters. battered women's shelters and transitional housing facilities in the Twin City Metro Area and Greater Minnesota on the night of October 27, 1994.

PERSONS IN TEMPORARY HOUSING PROGRAMS

	Number Adult Males (18+)	Number Adult Females (18+)	Number of Children with Parent(s)	Number of Unaccompanied Youth (<17)	<u>Total</u>
Twin City Metro Area					
Emergency Shelters	733	418	602	29	1.782
Battered Women's Shelters	0	85	144	4	233
Transitional Housing	164	468	615	34	1.281
Greater Minnesota				,	
Emergency Shelters	147	34	11	29	221
Battered Women's Shelters	-	37	68	-	105
Transitional Housing	48	195	<u>321</u>	4	_568
Total	1.092	1.237	1.761	100	4,190

Persons receiving vouchers for temporary shelters in a motel or other location are counted with the emergency shelter totals. Per ons interviewed in non-shelter locations are not included in this table.

Weightings were calculated using a sample balancing program available in the Princeton Statistical Program. This technique uses an iterative approximation to the least squares adjustment of W. E. Deming (Statistical Adjustment of Data, New York: Wiley, 1943). Additional detail on this procedure can be found in Appendix II.

The next table shows the number of homeless persons surveyed in non-shelter locations in the Twin City Metro Area and Greater Minnesota on October 27, 1994. Youth data also includes respondents interviewed at drop-in centers.

#### PERSONS INTERVIEWED IN NON-SHELTER LOCATIONS

	Number <u>Males</u>	Number <u>Females</u>	Number of Children with <u>Parent(s)</u>	Total <u>Interviewed</u>
Adult (18+)				
Twin City Metro Area	135	35	17	170
Greater Minnesota	_50	<u>16</u>	_8	<u>66</u>
Total	185	51	25	236
Youth ( <b>&lt;17</b> )				
Twin City Metro Area	16	28	3	44
Greater Minnesota	_8	<u>12</u>	<u>2</u>	<u>20</u>
Total (Youth)	24	40	5	64
Track Novak and Adula				
Total Youth and Adult in Non-shelter Locations	209	91	30	300

The information presented in the preceding tables shows that 4,190 persons were in Minnesota shelters or transitional programs on October 27, 1994 and 330 persons were found in non-shelter locations on that date (including 30 children who were not interviewed). This represents a total of 4,520 persons identified as homeless in Minnesota on the night of October 27, 1994. This is 1,529 more persons than were identified as a result of the October, 1991 statewide survey errort or an increase of 51 percent. Note however, that the number of available beds in temporary housing programs also increased by approximately 50 percent during this time period indicating that utilization has increased at approximately the same rate as program capacity. However, an unknown number of homeless persons are not represented in these counts including persons doubled up with other individuals or families on the night of the survey and persons in detoxification centers on that night.

The individual and family status of persons identified is shown below.

### Families Without Permanent Shelter on October 27, 1994

Single men with children	16
Single women with children	711
Couples with children	65
Unaccompanied youth with children	15
Number of Families Identified Without Permanent Shelter	807

# WHY THESE COUNTS ARE AN UNDERESTIMATE OF HOMELESSNESS IN MINNESOTA

Our counts of persons using shelters and transitional programs are comparable to figures cited in the Quarterly Shelter Survey conducted by the Minnesota Department of Economic Security.<sup>6</sup> Both are, nonetheless, undercounts of Minnesota's total population of those who are homeless or precariously housed.

As already noted, our sample of homeless persons on the street is a sample of convenience. The actual number of non-sheltered homeless persons on October 27 is not known. We do know, however, that the August 1991 survey of homeless American Indian people in Minneapolis conducted by the American Indian Task Force on Housing and Homelessness showed that more than one-quarter (28%) of the 247 American Indian people interviewed did not use public shelters of any type and relied only on friends and outdoor sleeping locations. Furthermore, research conducted by The Urban Institute in other states has found that estimates of the "non-shelter using" population range between 20 and 40 percent of the shelter using population depending on the availability of shelter beds, the season and weather conditions. If we apply the most conservative estimate (20 percent of the homeless who are sheltered) we would add

Martha Burt and Barbara Cohen. <u>America's Homeless: Numbers, Characteristics, and the Programs That Serve Them.</u> Washington, D.C., The Urban Institute Press, 1989.

Minnesota Department of Economic Security, Quarterly Shelter Survey, December, 1994.

A Report to the American Indian Task Force on Housing and Homelessness (St. Paul, Wilder Research Center, September, 1991).

approximately 500 more persons to our counts of adults and youth in non-shelter locations in 1994.

Moreover, our figures do not include homeless persons in detoxification centers throughout the state. Figures supplied by Minnesota's Department of Human Service's Chemical Dependency Division shows that there were an additional 33 homeless people in detoxification centers throughout the state on October 27, 1994.

Finally, and perhaps most importantly, our counts do not include people who have found short-term temporary arrangements with friends on that date. Our survey shows that approximately two-thirds of all hor eless persons in shelters occasionally stay with friends. This population of homeless persons "doubled-up" with friends or relatives was briefly investigated by the St. Paul Overnight Shelter Board. By asking St. Paul school children about persons living in their homes on a temporary basis, they found that there were as many people living in these circumstances as there were people in St. Paul shelters. Supporting this finding, data from the U.S. General Accounting Office show that the number of children and youth who are "doubled-up" in precarious housing situations is 2.7 times the number of children and youth in emergency shelters. On the content of the conte

St. Paul Overnight Shelter Board Report, 1990.

U.S. General Accounting Office. Children and Youths: About 68,000 Homeless and 186,000 in Shared Housing at Any Given Time (Washington, D.C.: U.S. Government Printing Office, 1989).

If we combine the above figures into a "Best Estimates" table and use the same methods for both our 1991 and 1994 data, we show the following result.

### Best Estimates of Homeless and Precariously Housed Persons in Minnesota on October 24, 1991 and October 27, 1994

#### 1991 ESTIMATE

Count or Estimate	Location	<u>Number</u>
Count	Persons in Shelters or Transitional Housing Programs	2,875
Count	Homeless Persons in Detoxification Centers	65
Estimate <sup>a</sup>	Persons on the Street (20% of total sheltered population)	575
Estimate <sup>b</sup>	"Doubled-up" Children and Youth (2.7 times sheltered youth and children)	2 525
Estimate <sup>c</sup>	"Doubled-up" Adults	<u>1,940</u>
Total		7.980
	1994 ESTIMATE	
Count	Persons in Shelters or Transitional Housing Programs	4,190
Count	Homeless Persons in Detoxification Centers	33
Estimate <sup>a</sup>	Persons on the Street (20% of total sheltered population)	838
Estimate <sup>b</sup>	"Doubled-Up" Children and Youth (2.7 times sheltered youth and children)	5,025
Estimate <sup>c</sup>	"Doubled-up" Adults	2,329
Total		12,415

Note. Methods for calculating these estimates are on the next page.

### Methods for calculating these estimates:

a) Total sheltered population X .20 - Estimate of persons on the street

$$(2,875) X (.20) = 575 \text{ for } 1991$$

Based on the Urban Institute's 1989 study "America's Homeless" finding that the "non-shelter using" population is between 20 and 40 percent of the sheltered population.

b) Total number of sheltered children and youth X(2.7) = Estimate of the number of children and youth who are "doubled=up."

$$(935) X (2.7) = 2,525 \text{ for } 1991$$

$$(1,869) X (2.7) = 5,025$$
for 1994

Based on the U.S. General Accounting Office 1989 study that found 2.7 times as many children and youth in doubled-up situations as in emergency shelter.

c) Total number of sheltered adults = estimate of the number of adults "doubled-up"

Based on St. Paul Overnight Shelter Board found that there were as many people living in "doubled-up" circumstances as living in shelters.

### **SURVEY INTERVIEWS**

Interviews were conducted with adults and youth in temporary housing programs as shown below. In the Metro Area, 47 persons approached for an interview refused to participate, and in Greater Minnesota, 22 persons refused. The overall response rate (including street locations) was 95 percent (95.5 percent Metro and 94.5 percent Greater Minnesota).

### NUMBER OF ADULTS (18 AND OLDER) INTERVIEWED IN TEMPORARY HOUSING PROGRAMS

Twin City Metro Area	Number <u>Males</u>	Number <u>Females</u>	Total Number <u>Interviewed</u>	Total Number of Persons in Temporary Housing	Percent of Total Population <u>Interviewed</u>
Emergency Shelters	242	136	378	1.151	32.9
Battered Women's Shelters	-	63	63	85	74.1
Transitional Housing	86	263	349	632	55.2
Greater Minnesota				·	
Emergency Shelters	109	23	132	181	72.9
Battered Women's Shelters	-	24	24	37	64.9
Transitional Housing	<u>49</u>	125	141	<u>243</u>	<u>58.0</u>
Total	453	634	1.087	2.329	46.3

### NUMBER OF YOUTH (17 AND YOUNGER) INTERVIEWED IN TEMPORARY HOUSING PROGRAMS<sup>11</sup>

Twin City Metro Area	Number <u>Males</u>	Number <u>Females</u>	Total Number <u>Interviewed</u>	Total Number of Persons in Temporary Housing	Percent of Total Population Interviewed
Emergency Shelters	2	5	7	29	24.1
Battered Women's Shelters	-	4	4	4	100.0
Transitional Housing	7	12	19	34	55.9
Greater Minnesota					
Emergency Shelters	9	7	16	29	55.2
Battered Women's Shelters	-	-	-	-	-
Transitional Housing	_2	_2	_4	4	100.0
Total	20	32	50	100	50.0

Results of the youth survey are reported separately.

### **SURVEY RESULTS**

#### Introduction

Study information is presented in four ways. First, study findings are presented in response to key questions that are frequently posed by funders and collaborators. Second, a general descriptive profile is presented giving an overview of the characteristics of those who were homeless on October 27, 1994. Third, specific aspects of the population are highlighted by comparison to U.S. Census data, personal accounts, and specialized analyses of homeless children and families, women fleeing abuse, barriers to employment and long-term homelessness.

Fourth and finally, detailed data tables are presented allowing readers to examine specific survey questions broken down by locale (Metro Area vs. Greater Minnesota), gender (men vs. women) and shelter type (emergency, battered women's, transitional and non-shelter locations). In addition, project staff are prepared to conduct specific analyses as needed by planners and funders on an "at cost" basis.

-11- 33

### **KEY QUESTIONS**

### 1. Does the study show an increase in the number of homeless people in Minnesota?

When we examine counts of the number of persons using various types of temporary housing programs in Minnesota over the past 10 years, we see a substantial increase in the total number of homeless persons.

Metro Area surveys conducted by Hennepin County and the Wilder Foundation in 1984 found approximately 400 adults in Hennepin and Ramsey County emergency shelters during single night survey efforts. This compares to the approximately 1,100 adults found in Metro Area emergency programs at the time of our 1994 survey. This represents a 175 percent increase in adult emergency shelter utilization in the Metro Area alone from 1984 to 1994.<sup>12</sup>

The first shelter counts to provide data for both the Metro Area and Greater Minnesota were conducted by the Minnesota Department of Economic Security in 1985. These counts, conducted quarterly, show a substantial increase in the number of persons served in <u>all</u> temporary housing programs including emergency shelters, battered women's shelters and transitional programs. The following table compares the November, 1985 counts to the counts conducted in conjunction with the most recent statewide survey (November, 1994).

Men, Women and Children in Minnesota's Temporary Housing Programs: 1985 and 1994<sup>13</sup>

	November, 1985		Novembe	er, 1994	% Increase: 1985-1994		
	Metro	Greater MN	Metro	Greater MN	Metro	Greater MN	
Men	542	79	1,125	243	108%	208%	
Women	275	53	988	243	259%	358%	
Children	240	85	1,482	411	518%	384%	
Total	1,057	217	3,595	897	240%	313%	

Results of the Emergency Shelter Survey, February 29, 1984, Hennepin County Office of Planning and Dr velopment, March 1984. Results of the Emergency Shelter Survey, April 11, 1984, Amherst H. Wilder Foundation, May, 1984.

From Minnesota Department of Economic Security, Quarterly Shelter Report, November, 1985 and November, 1994.

This table shows that the largest percentage increase in temporary housing program utilization has occurred among children, particularly in the Metro Area (518%). Nonetheless, program use for men, women and children has increased by more than 100 percent in all categories in all parts of the state.

While the increase in numbers described above is real, Minnesota's temporary housing capacity has also grown substantially during this time period. Specialized family shelters and the emergence of transitional housing programs has resulted in a total current capacity of 5,017 bed spaces (as of November, 1994). This compares to the first bed space count (conducted by the Minnesota Department of Economic Security in May, 1986) of 1,420. Thus, while the number of persons seeking temporary shelter has grown substantially, the available temporary shelter space has grown substantially as well. Minnesota, more than other states, has attempted to keep pace with the demand for temporary housing programs.

## 2. Are the people who experience homelessness different from those who have regular housing?

There is no simple answer to this question. In some ways, the homeless and non-homeless are very much alike. Both populations have approximately equal numbers of males and females, and military veterans. Families in both groups, on average, have about the same number of children. On the surface it may appear that it is poverty alone that makes the difference in the ability to obtain and maintain housing. But a closer look shows some important differences.

First, those who are homeless in Minnesota are much more likely to be persons of color; often African Americans in the Metro Area and American Indians in Greater Minnesota. The following table shows the racial and ethnic background of those who are homeless in comparison to the U.S. Census data for Minnesota.

### Racial and Ethnic Backgrounds of All Minnesota Residents Compared to Persons Without Permanent Shelter

	White	African <u>American</u>	<u>Hispanic</u>	Native <u>American</u>	Asian	Mixed Racial Background
U. S. Census Minnesota 1990	94%	2%	1%	1%	2%	Not Avail.
1994 Twin City Metropolitan Homeless Sample	33%	49%	4%	7%	1%	6%
1994 Greater Minnesota Homeless Sample	61%	8%	7%	14%	2%	8%

Second, those who are homeless have often had difficult starts in life. In fact, 46 percent of all adults in the present study were either abused as children, had a child before the age of 18, or lived in a foster home or treatment facility as a youth.

Third, violence is often a factor in the lives of homeless people. An abusive partner is the most frequently cited reason for homelessness among women. Violent neighborhoods and unsafe schools are frequently cited by homeless families as reasons for coming to Minnesota.

Fourth, alcoholism continues to be a major factor in homelessness. About one-fourth of all homeless women and more than one-third of all homeless men report current problems with alcohol. Thirty-five percent of all men in emergency shelters have been admitted to a detox center.

Fifth, severe mental illness is reported by no fewer than 20 percent of respondents in all shelter and non-shelter locations. This represents a rate of mental illness approximately eight times greater than that found in the general U.S. populations.

These differences do not mean that those experiencing homelessness can not be successful in finding permanent housing. On the contrary, public and private agencies now invest substantial resources in reducing child abuse, teenage pregnancy, out of home placements, substance abuse and domestic violence; factors known to be associated with homelessness. Nonetheless, persons and agencies providing services and opportunities to those who are homeless must take account of the sometimes significant barriers to be overcome when trying to create stable living arrangements and reasonable employment opportunities.

-14-

### 3. Has the homeless population in Minnesota changed during the 1990's?

Wilder's first statewide homeless survey was conducted in October, 1991 and the current study (October, 1994) provides us with several opportunities for comparison. At least three important differences can be observed.

First, those who are homeless in 1994 are more likely to be employed than those we interviewed in 1991. The percentages of homeless persons who are employed increased from 19 percent to 25 percent over this time period, and the percentage with full-time jobs increased from 8 to 13 percent. It appears that it is increasingly possible to be both working and homeless.

Second, the proportion of men and women who have received some form of job specific training has risen from about one-quarter to about one-third of the total homeless population. Job training varies widely and includes both service sector, agricultural and industrial related training experiences.

Third, the configuration of temporary housing programs has changed. While the number of emergency shelters and battered women's shelters has remained fairly steady, the number of transitional housing programs has grown by 54 percent during this time period (from 41 to 63). This means that Minnesota is investing more time and effort in programs designed to end or reduce homelessness rather than on programs focused on temporary relief. In some ways, this is what makes Minnesota attractive to those who have experienced homelessness in other states. Nonetheless, transitional programs continue to serve mostly women and families, leaving relatively few programs of this type available for single men. Also of importance is the fact that the majority of persons served in Metro Area transitional programs are white while the majority of those served in Metro Area emergency programs are African American. This raises questions about the extent to which all people experiencing homelessness have equal access to the programs that offer opportunities for more permanent housing solutions.

# 4. Are those who are homeless in Minnesota very different from those who are homeless in other states?

Not all states conduct comparable studies of homelessness. In fact, Minnesota is unique in both its training methods and use of volunteer interviewers. Nonetheless, a recent study in Northern California conducted by researchers at Stanford University provides some useful comparisons as shown in the table on the next page.

ERIC Foulded by ERIC

-15- 37

# Comparisons of Two Homeless Adult Samples in the 90's

	Stanford's 1993 Homeless Study (N=1500)* Percent	Wilder's 1994 Homeless Study (N=2470)** <u>Percent</u>
Homeless adults between 25 and 45 years old	67	68
Persons of color	50	60
Graduated from high school (excludes GED)	60	62
Attended some college	25	26
Women in foster care as child	16	18
Men in foster care as child	10	12
Women who were sexually abused as children	29	36
Men who were sexually abused as children	6	7
Women who were physically abused as children	26	42
Men who were physically abused as children	13	25
Multiple episodes of homelessness	43	35
More than one year without permanent shelter	35	31
Alcohol use (excessively, Stanford Study) (Consider self chemically dependent,	33	31
Wilder Study) Use of illegal drugs	` 20	20
Hospitalized for psychiatric problems	20	13

<sup>\*</sup> Marilyn Winkleby, et. al., "The Medical Origins of Homelessness" (Am. Journal of Public Health, 1992; 82: 1395-1398.)

<sup>\*\*</sup> Weighted sample based on 1,323 interviews with adult respondents.

Although remarkably similar, the two samples show some interesting differences. For example, a higher percentage of men and women in Minnesota report that they have been physically abused as children. Minnesota also has a greater proportion of persons of color among the homeless. However, Minnesota's homeless are less likely than those in the Stanford study to have mental health hospitalizations and less likely to have multiple episodes of homelessness.

### 5. Does Minnesota attract people who have experienced homelessness in other states?

There are two important issues to keep in mind when asking this question. First, we do not know how many people leave Minnesota to utilize programs for the homeless in other states. Second, those who are homeless move to Minnesota for many of the same reasons as those who have regular housing.

When survey respondents who have lived in Minnesota for two years or less are asked why they came to Minnesota, the answers parallel those given by recent arrivals who have their own housing: to find work, better schools, be closer to relatives or friends, escape an unsafe neighborhood or an abusive partner (see Detail Tables on pages 259-262).

While it is true that approximately 39 percent of those who are homeless in the Metro Area and 42 percent of those who are homeless in Greater Minnesota have lived in the state for two years or less, it is also true that approximately one-fifth of the Metro Area group and two-fifths of the Greater Minnesota group have previously lived in the state. Moreover, it would be difficult to dramatically affect the attractiveness of Minnesota to those who are experiencing homelessness without substantially altering the state's attractiveness to the many others who move to the state each year. It is unlikely that welfare benefits alone could account for the migration of homeless people to Minnesota. Reasonably safe schools and shelter arrangements as well as the availability of transitional housing programs and high quality human services are also part of the mix. No single factor will explain why a homeless family in Milwaukee, Chicago, Fargo or Gary decides to move to Minnesota.

-17- **3**9

### GENERAL DESCRIPTIVE PROFILE

### BACKGROUND CHARACTERISTICS<sup>14</sup>

On October 27, 1994 the statewide population count of all persons residing in emergency shelters, battered women's shelters and transitional housing facilities found 2,329 adults (1,092 men and 1,237 women) and 1,761 children accompanied by adults in Minnesota's temporary housing programs. An additional 236 persons (185 men and 51 women) were interviewed in non-shelter locations. Men make up about 50 percent of the adult population. However, the combined total of women and children is more than double the number of men. The average age for men is 35.8 years and for women, 31.0 years. Adult users of temporary housing arrangements in Minnesota are mostly people of color. Survey results indicate that 39 percent of the adults were White, 40 percent were African American, 9 percent were American Indian. 4 percent Hispanic, 1 percent Asian, and 7 percent of mixed racial background. Outside the Twin Cities metropolitan area the majority of temporary housing users are White. About 48 percent of the adults in temporary housing arrangements have lived in Minnesota for more than five years. This compares to about 92 percent of the housed population who have lived in Minnesota for five years or more.<sup>15</sup>

Most homeless persons (57%) have never been married. Of those who have been married at least once, 10 percent are separated, 24 percent are divorced, 8 percent are currently married and about 1 percent are widowed. Almost two-thirds of homeless adults (62%) grew up in another state. This compares to approximately 25 percent of the general population of Minnesota residents who were born and grew up outside of the state. Three-fourths (73%) of all homeless adults have graduated from high school or completed a GED, and 26 percent have gone on to some type of post-secondary education. Currently 18 percent of all adults in temporary housing programs are attending school. Approximately 89 percent of adults in the general population have completed high school. The secondary education is the general population have completed high school.

<sup>17</sup> Ibid.

This section reports many statewide totals. To derive these totals from the data tables beginning of page 57 it is necessary to add the Metro Area figures to the Greater Minnesota figures.

<sup>1990</sup> Census of Population and Housing. Summary Tape File 3A-Minnesota. (Washington, D.C., U.S. Bureau of the Census.)

lbid.

Fourteen percent of the adults surveyed are military veterans (25 percent of the men and 3 percent of the women). Slightly more than 18 percent of the adults in the general population are military veterans.<sup>18</sup>

### SERVICE USE

Regarding service use in the month preceding the survey, survey results show that food stamps (52%), free clothing (37%), and hot meal programs (33%) were used most often by homeless adults. Over half of homeless adults surveyed have medical coverage of some kind. Fifty-nine percent currently have Medical Assistance or General Assistance Medical Care, and another 4 percent have Minnesota Care. One-third of adults surveyed (32%) report that they have used an emergency room in the last six months. Thirty-one percent of adults report they need help applying or reapplying for services. Respondents most often need help in applying for the following services: housing assistance, medical assistance, food stamps, supplemental security income, jobs or unemployment processing and general assistance.

### INCOME

When asked about their <u>main</u> source of income, respondents identified the following sources: AFDC, 22 percent (3 percent of the men and 43 percent of the women); steady jobs, 16 percent; GA, 15 percent (19 percent of the men and 10 percent of the women); and day labor, 10 percent (17 percent of the men and 3 percent of the women). Five percent of the adults surveyed (14 percent of the men and 3 percent of the women) reported no income in the month preceding the survey.

When asked about their total income for the month preceding the survey (September, 1994), 17 percent report an income of less than \$100, 18 percent report income of \$101 to \$300, 22 percent report incomes of \$301 to \$500 and 37 percent report an income of over \$500. Income data was not reported by 5 percent of the respondents. Homeless men have lower median incomes compared to homeless women in similar housing arrangements. The median income for men in Emergency Shelters is \$300; in Transitional Housing, \$438, and in non-sheltered locations, \$209. The median income for women in Emergency Shelters is \$446, in Battered Women Shelters, \$532, in Transitional Housing, \$532, and in non-shelter locations, \$400.

<sup>18</sup> Ibid.

### SHELTER USE

For 63 percent of the adults, this was their first time being homeless. Nine percent of adult respondents report one previous episode of homelessness, 12 percent of adults report being homeless 2-3 times, 7 percent of adults report 4-9 previous episodes of homelessness, and 2 percent report more than 10 previous episodes of homelessness. Sixty-two percent of the adults have been in their current temporary housing arrangement for less than one month. Thirty-eight percent have been in their current temporary arrangements for more than one month (26 percent of the men and 47 percent of the women). Only 3 percent of men and 7 percent of women have been in their current temporary arrangement for more than one year.

### LIVING IN OTHER RESIDENTIAL PROGRAMS

With respect to prior residential placements, 57 percent of the homeless adults surveyed have lived in at least one type of residential facility or program. Men are more likely than women to have lived in some type of non-family setting (68% vs. 45%). Homeless adults have most often lived in: drug or alcohol treatment facilities (33%); correctional facilities or detention centers (27%); halfway houses (24%); and foster care (15%). Homeless men and women differ in the type of placements they have had. Men are more likely than women to have been in a correctional facility (38% vs. 16%), in a drug or alcohol treatment facility (44% vs. 21%), and in a halfway house (33% vs. 14%). Women are more likely than men to have been in foster care (18% vs. 12%).

A very small proportion of the homeless adults surveyed have lived in a residence for persons with physical disabilities (3%).

The following table shows the residential service history of study participants.

TYPE OF PLACEMENT	Percent of <u>Males</u>	Percent of <u>Females</u>	TOTAL
Foster Care	12%	18%	15%
Drug or alcohol treatment	44%	21%	33%
Residential Treatment	12%	8%	10%
Corrections	38%	16%	<b>27</b> %
Residence for persons with physical disabilities	4%	2%	3%
Halfway house	33%	14%	24%
Mental health hospital	15%	12%	13%
Facility for persons with mental retardation	1%	<1%	1%
Orphanage	4%	2%	3%
Group Home	12%	9%	11%
Indian school	3%	2%	3%
Any of the above placements	68%	45%	57%

### MIGRATION TO MINNESOTA

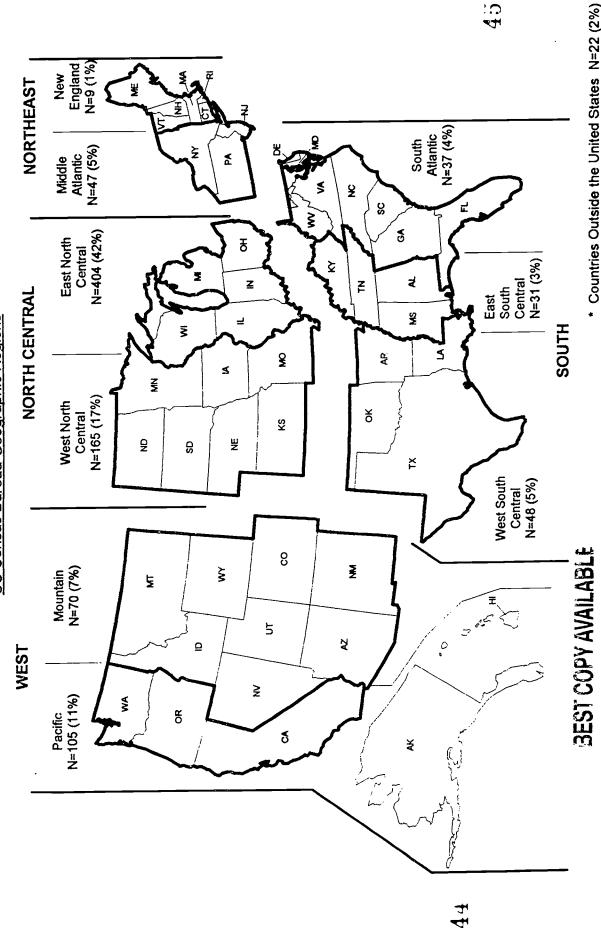

Men and women are similar in terms of the length of time they have lived in Minnesota. Twenty-eight percent of the homeless adults surveyed have been in Minnesota for less than one year, 11 percent have lived in Minnesota from one to two years, and 61 percent have been in Minnesota longer. One-quarter of recent residents (respondents who have lived here two years or less) indicate that they previously lived in Minnesota.

Of those who have lived in Minnesota two years or less (N=969), the majority came from either East North Central states (42%) or West North Central States (17%). Of the remaining group, 11 percent came from Pacific states, 7 percent from Mountain states, 5 percent from West South Central states, 5 percent from Mid-Atlantic states, 4 percent from South Atlantic states, 3 percent from East South Central States, and 1 percent from New England. Two percent of recent residents came from countries outside of the United States (see maps on the next three pages). The main reasons for moving to Minnesota cited by recent residents include: looking for work (38%); to be with family or friends (23%); to improve opportunities for themselves or their children (19%); to move to better/safer environment (16%); and to flee violent neighborhoods (11%). Only 10 percent of those in Minnesota two years or less were able to obtain regular housing when they first came to the state. For those who were not able to obtain regular housing when they first arrived, 44 percent stayed in shelters; 30 percent stayed with family and friends and 16 percent made other arrangements including staying outdoors, in half-way houses, in a car or vehicle.

### HOUSING RESOURCES

Thirty-one percent of homeless adults surveyed (36 percent of the men and 25 percent of the women) report being without housing for more than a year. Thirty-two percent of respondents are on a waiting list for Section 8 housing, and approximately 20 percent of this group have been waiting for over a year. The majority of the homeless men (84%) state that they only need an efficiency or one bedroom apartment, while 68 percent of the women require two, three, or more bedrooms. The vast majority of the respondents (86%) indicate that they want permanent housing in the area in which they are currently staying.

Thirteen percent of the those surveyed (19 percent of the men and 8 percent of the women) indicate that they are not able to pay any amount for rent right now. Seven percent indicate that they could pay between \$1 and \$100 a month for rent, 24 percent indicate an ability to pay \$101 to \$200, 19 percent indicate an ability to pay \$201 to \$300, 17 percent indicate an ability to pay \$301 to \$400, 10 percent indicate an ability to pay \$401 to \$500, and 7 percent indicate that they could pay over \$500 per month. Slightly over half (52%) of the men compared to about a third (36%) of the women report that the maximum rent they could afford to pay is \$200 or less each month.

Fifty-nine percent of homeless adults (51 percent of the men and 67 percent of the women) indicate that their last regular or permanent housing was in Minnesota, 38 percent (44 percent of the men and 33 percent of the women) report that their last regular housing was in another state or country, and 2 percent (3 percent of the men and less than 1 percent of the women) report that they have never had regular or permanent housing.

Respondents were asked to describe the main reasons they left their last housing. The main reasons men cited for leaving include: a relationship ended (14%), the loss of a job or income (12%), drinking or drugs (10%), moved to get a job (10%), eviction (8%), and to escape the violence, drug traffic or gangs (8%). The main reasons women left their last housing were: to flee an abusive relationship (25%), couldn't afford the rent (14%), eviction (12%), to escape the violence, drug traffic or gangs (10%), to leave substandard housing (9%) and a relationship ended (8%).

Reasons persons are unable to obtain housing. The main reasons given by women for being unable to obtain housing include: financial problems (50%), shortage of affordable housing (32%), no job (15%), previous rent history (10%), unable to find suitable housing (7%), and family size (7%). The barriers cited by men are somewhat different from those reported by

-25-

women. The reasons cited by men include: financial problems (37%), no job (28%), shortage of affordable housing (14%), alcohol and/or drugs (11%), and rent history (7%).

### CHILDREN OF SHELTER RESIDENTS

Although three-fourths (78%) of the women and 41 percent of the men report that they <u>have</u> children, the proportion of men caring for their children in shelters is very low. Sixty-five percent of the women and 9 percent of the men in temporary housing programs were accompanied by children on the night of the survey.

Of those with school age children, approximately 38 percent have children with learning or school problems, and 5 percent have children who have trouble going to school due to housing problems. (Additional details about children who are with their parents in shelters can be found on pages 33-39).

### **EMPLOYMENT**

Twenty-five percent of persons surveyed in temporary housing were employed and 13 percent had full time jobs. However, only 12 percent of men and 13 percent of women had jobs that had lasted at least three months. Most working respondents were employed as food preparers, house cleaners, janitors, unskilled laborers or salespersons.

One-third of unemployed homeless adults report that it has been less than six months since they last held a steady job. Nineteen percent of adults surveyed had a job between six months and one year ago, 15 percent had a job one to two years ago, 13 percent were last employed three to four years ago, and 15 percent report that their last job was more than four years ago. Three percent say they have never held a steady job.

A number of problems appear to prevent homeless persons from obtaining steady employment. The ten most frequently mentioned barriers to employment includes: cost of child care, transportation, no address, lack of education, physical health problems, lack of job skills, disabilities, lack of experience, chemical dependency, and mental health problems. The cost of child care, transportation, and education appear to be more significant barriers for women than for men.

5 j

### CHEMICAL DEPENDENCY

More than one-third (37%) of homeless men and one-fourth (24%) of homeless women report chemical dependency problems. Thirty-nine percent of the men and 12 percent of the women have been admitted to a detox center at least once. Forty-four percent of the men and 21 percent of the women report that at some time in their life they have lived in an alcohol or drug treatment facility. Twenty-two percent of the men and 11 percent of the women have been in residential drug treatment programs within the last two years. Thirty-five percent of the men and 17 percent of the women have received out-patient drug or alcohol treatment.

### PHYSICAL HEALTH

Thirty-eight percent of respondents had received medical care for an illness in the previous six months. Thirty-four percent of the respondents indicate they currently need to see a doctor. Approximately one-third of homeless adults (32%) have used emergency room services during the previous six months. Fifty-nine percent of those surveyed (47 percent of the men and 71 percent of the women) were receiving Medical Assistance or General Assistance Medical Care, and 4 percent of the respondents had used Minnesota Care.

### MENTAL HEALTH

Mental illness is a significant problem for approximately one-fourth of the homeless respondents in the survey. Twenty percent of the men and 21 percent of the women have quit a job because of nervousness, depression, or mental health problems. Fifteen percent of the men and four percent of the women have quit going to school because of nervousness, depression, or mental health problems.

In all, 23 percent of homeless adults in this sample have received outpatient mental health services and five percent have lived in a hospital for persons with mental health problems within the last two years.

Physical and sexual mistreatment as a child is not uncommon for respondents in the survey. Twenty-five percent of the men and 42 percent of the women indicate that they have been physically mistreated as children, and 7 percent of the men and 36 percent of the women indicate that they have been sexually mistreated as children.

<sub>-27-</sub> 52

The following table shows the percent of respondents within each shelter type who report a specific mental health diagnosis.

# MENTAL HEALTH CHARACTERISTICS OF ADULT HOMELESS

	Emergency (N=1301) Percent	Battered (N=114) Percent	Transitional (N=819) Percent	Street (N=236) Percent
Schizophrenia	3.7	.9	3.4	3.4
Paranoid or delusional disorder, other than schizophrenia	1.6	.9	4.0	6.4
Manic episodes or manic depression, also called				
bipolar disorder	8.7	3.5	12.0	9.7
Major depression	13.6	19.3	30.2	16.9
Anti-social personality, obsessive-compulsive personality, or any other				
SEVERE emotional disorder	8.1	3.5	9.6	14.4
Any of the above	20.6	22.8	37.6	23.7
Alcohol abuse disorder	20.1	8.8	22.6	28.4
Drug abuse disorder	16.7	11.4	20.4	16.9
Dual Diagnosis (CD and MI)	9.4	6.3	17.3	14.0

At any given time, the U.S. Department of Health and Human Services estimates that approximately 2.5 percent of all adults in the United States are afflicted by a "severe mental illness" defined by the National Institute of Mental Health as schizophrenia. bipolar or other affective disorder or major depression. The 1994 sample of persons experiencing homelessness shows that no fewer than 20 percent of those who are homeless are afflicted by these disorders. This represents a rate of severe mental illness among Minnesota's homeless population that may be as much as eight times greater than in the general population. This finding, however, must be interpreted with caution since it is based on self-reported survey responses and not diagnostic interviews.

## Comparison to 1990 Census Information

U.S. Census information gathered during 1990 makes it possible to compare the characteristics of persons in temporary housing programs to the characteristics of those in the general population. The following table provides comparisons for the following variables: sex, ethnicity, age, educational attainment, marital status, veteran status, nativity, rents of \$300 or more per month, receipt of public assistance and social security benefits.

Public Health Reports, U.S. Department of Health and Human Services, Public Health Service, Vol. 107, No.
 6, pp. 663-668, Nov.-Dec. 1992.

### PERSONAL ACCOUNTS

The general statewide profile of people who were homeless on October 27, 1994 show a heterogeneous population tied together by three common elements: poverty, joblessness or inadequate employment, and no place to call home. Many of those who are homeless in Minnesota also share backgrounds of abuse, institutionalization and alcoholism. The accounts which follow provide additional detail regarding the responses of individual survey participants to questions during the stripy interviews.

- Duane is a 32 year old White male who grew up in Minnesota but most recently lived in Texas. He returned to Minnesota less than a year ago after his divorce to seek treatment for his alcoholism. For the last two weeks he has stayed in a shelter in Greater Minnesota. Duane's main source of income is from work as a stone cutter. He is a high school graduate and has completed a Technical College course in small engine repair. He has worked at jobs using these skills. As a military veteran, he served stateside during the 1970's. Duane has a long history of institutionalization. He reports having been in a foster home, a group home, a correctional facility, and an orphanage as a youth. As an adult he has been in a correctional facility, a drug or alcohol treatment facility, and a half way house. The only physical or mental health problem that he reports is alcohol abuse disorder. He states that his main needs are to remain sober and get his life together.
- Connie is an 18 year old American Indian female. Her home reservation is White Earth. She has completed her GED but has not attended any type of job training program. She has never married and has no children. As a youth she lived in a foster home, a residential treatment facility, a hospital for persons with mental health problems, a group home and an orphanage. She has never had any regular housing. Connie was both physically and sexually abused as a child. Now that she is 18 she is on her own. Her only source of income is General Assistance. Connie has never been employed. Connie has been told by a doctor or nurse that she has both bipolar disorder and major depression and is currently taking anti-depressants. Connie sees her mental illness as a barrier to getting a place to live as well as getting a job.
- Delaine is a 44 year old African American female who grew up in Illinois. She moved to Minneapolis less than a year ago after her daughter was killed in a random drive-by shooting. She came to Minnesota to escape the violence and gangs in her home town. She came to the Twin Cities because she believes it is a safer place to live. She graduated from high school and worked for over 10 years on her last job as a secretary and hopes to find a new job here very soon. She has never been homeless before. Her other daughter and two grandchildren came with her. Delaine has never lived in any type of institution. She does not report any physical or mental health problems. Her only need is to find a job and a place to live.

-31- 58

- Juan is 26 year old married Hispanic male who grew up in California. He has lived in Minnesota for over 5 years. His wife and two children are with him in a transitional housing program. He graduated from high school and started a course in auto mechanics, but did not complete it. He has recently returned to school to complete the course. Juan does not report any chemical dependency problems or mental health issues. He is currently working for about 20 hours a week as a janitor. This job has lasted for more than three months. His family lost their last housing because he lost his job. Now that he is in the transitional program, he is hoping to get back on his feet and complete his education. His main needs are to get a job and finish his education.
- Jennifer is a 17 year old white female who grew up in Greater Minnesota. She moved to the Twin Cities area after her mother asked her to leave. There were a lot of conflicts between Jennifer and her mother. She reports that her mother has drinking and drug problems. Jennifer does not think that she would be allowed to return home. She reports being both physically and sexually abused. Since moving to the Twin Cities, she has been approached by persons offering her work in the saunas or dating adults. She reports that so far she has avoided being sexual with someone for the purpose of getting shelter, clothing, or food. Although she is not currently in school, she is planning to enroll as soon as possible. She reports her main strengths are her personal ambition and her interpersonal survival skills. Her main needs right now are to get into school and find stable housing.
- Mary Ann is a 27 year old White female who grew up in the Twin Cities area. She has three children and is recently divorced from an abusive husband. She reports that during the last 12 months she has sought health care because of injuries caused by violence. The only physical or mental health problem that she reports is major depression. She sought the safe environment of a battered women's shelters to get away from her ex-husband. Now that she is there, she is working with the advocates to stabilize her life again. Mary Ann is a high school graduate. She has not worked for the last five years. She reports that two of her three children have emotional or behavioral problems that interfere with daily life. Neither of the children have received needed services. All three children are of school age and attended school the day of the survey. Two of the children have learning or school problems and one child has repeated a grade in school. Mary Ann reports that her children need some kind of counseling to deal with the problems caused by living in an abusive environment. Her main needs are to find a job, to find safe and affordable housing for her family and to get her life together.
- Jason is a 15 year old Bi-racial male who has decided to leave home because of the constant conflict with his step-father. He is living with several other youths in an abandoned building. Returning home is not something he sees as an option since he does not feel he would be allowed to return. He is currently not attending school, but is working with a youth advocate to get back into school. He does not consider himself chemically dependent but reports that his use of drugs and alcohol has caused problems in the past. Jason has lived in both a foster home and a residential treatment program. He sees his main needs as getting into school and finding stable housing. He views his survival skills as his main strength.

Note: All names are pseudonyms.

-32- 57

### HOMELESS CHILDREN AND FAMILIES

Children in temporary housing are often of preschool age and usually accompanied by their mothers. School-age children in temporary housing are more likely than housed poor children to have repeated a grade in school, probably, in part, because of unstable housing situations. AFDC is the main source of income for two-thirds of homeless families. Over half are on waiting lists for public housing or subsidized housing. Most cannot afford to pay more than \$400 for housing. The primary non-housing needs of children listed by their parents/guardians were clothing, shoes, food, stable school arrangements, and child care.

This section of the report examines information available on 1,007 children whose parents were interviewed as part of the study and who provided complete information on their children. This number represents 57 percent of the 1,761 children in temporary housing programs on the day of the survey.<sup>20</sup>

Most children were with their mothers or a female caretaker (81%), some were with both parents or two adult caretakers (16%), and a few were with their fathers or a male caretaker (4%). Of these parents/caretakers, 16 percent were currently married, 34 percent had been previously married and 50 percent had never married. The average number of children with a parent/caretaker was two. Fifty-five percent of the children were in transitional housing, 27 percent were in emergency shelters, 16 percent were in battered women's shelters, and 2 percent were at non-shelter locations. Children were most likely to be with both parents or two adult caretakers if they were in a transitional housing program in Greater Minnesota (87%).

Slightly over half of the children were under age six, 38 percent were between 6 and 12, and 10 percent were 13-17 years old.

The following table provides additional detail on child demographics based on interview data obtained from adult caretakers.

ERIC Full Text Provided by ERIC

53

There are 1.761 children recorded in temporary housing programs on the date of the survey and a total of 1.023 children accompanying surveyed adults on that date. Of this group, we are able to estimate the characteristics of 1,007.

### Child Demographics, 1994 (Children With Adults) N=1,023\*

<sup>\* 1.023</sup> is the total number of children with adults on the survey date. 1.007 is the total number of children for whom information is available.

### HEALTH AND SCHOOL PROBLEMS

Survey respondents were asked several questions about the health and emotional problems of their children. The proportion of children having emotional or behavioral problems is roughly one in ten. The figures for chronic or severe physical health problems are about the same. Approximately one-fourth of school-age homeless children were reported to have learning or school problems. Children in emergency housing programs were more likely than those in other temporary housing programs to have repeated a grade in school. Additional detail is provided in the following table.

59

# Child Health and School Problems, 1994 (Children With Adults N=1,007)\*

### COMPARISONS TO "HOUSED" FAMILIES WITH LOW INCOMES

A 1991 Wilder Research Center survey of "housed" families with low incomes was conducted as part of a follow-up evaluation of the STRIDE program. All families were recipients of AFDC in Ramsey County 30 months prior to the survey. Most still resided in the metropolitan area at the time of the survey. Several questions about health and school participation of children were common to the STRIDE survey and the homeless study. The results are presented in the table below.

Health and School Problems Among Homeless Children and Among "Housed" Children in Metropolitan Area Families With Poverty Incomes

	Per	rcent of I Childi	Percent of Housed Children in Poverty Families	
Health	Total	Metro Area	Greater Minnesota	
Percentage of Children With:  Chronic or severe physical conditions that interfere with daily activities  Emotional or behavioral problems that interfere with daily activities	8	9	7	8
School Percentage of children who are age 6 or older.  Percentage of children 6 or older	48	48	48	58
who:  Have a learning or school problem  Have repeated a grade in school	25	22	32	20

6i

The table shows that in both samples the proportion of children having chronic or severe physical health problems is slightly less than one in ten. The figures for emotional or behavioral problems are similar, although it appears that homeless children may be somewhat more likely to have such problems.

Approximately one-fourth of homeless children and one-fifth of housed children were reported to have learning or school problems. The largest difference between the two samples is in the proportion of children who have repeated a grade in school. The proportion in the homeless sample is over one and one-half times that of the housed sample. This difference may occur because children in the homeless sample miss school more often. Eleven percent of the school-age children in the homeless survey have trouble going to school due to their housing situation. Six percent of school-age homeless children were not attending a school at the time of our survey.

### HOUSING AND ECONOMIC CIRCUMSTANCES

About one-fourth of adults in temporary housing who are accompanied by children (i.e., homeless families) have been homeless less than one month. Over half have been homeless one to 12 months, and 20 percent have been homeless for more than one year. Over half are on a waiting list for some type of subsidized housing. Two-thirds could afford to pay \$400 or less per month for housing including 25 percent who could afford \$200 or less. For about two-thirds of the families, AFDC was the main source of income in the month prior to the survey. For 17 percent, steady employment was the main source of income in the previous month.

Most families used food stamps in the previous month, one-third used clothing shelves, one-fourth used food shelves, and one-third used the WIC program. Less than one-fifth of the respondents report problems in obtaining health and dental care for their children. Seventy percent of the families were currently receiving Medical Assistance. Unmet child care needs during the preceding year were reported by 48 percent of the respondents.

The following tables show: 1) the geographic and shelter type variations related to health care, dental care, child care and food needs for children in our sample and 2) differences in the circumstances of adults accompanied by children when compared to the circumstances of homeless adults without children.

### WOMEN FLEEING ABUSE

The most common single reason for women to seek temporary shelter in Minnesota is to flee an abusive partner. Of the 1,205 women whose characteristics we can represent in the statewide study, 303 (25%) indicate that at least one of the main reasons they left their last housing was to flee abuse. Of this group, 91 (30%) were staying in battered women's shelters, 162 (53%) were living in transitional housing, 45 (15%) were staying in emergency shelters and six (2%) were in non-sheltered locations. There has been an increase in the number of women fleeing abuse living in transitional housing programs from 1991 to 1994. In 1991 the percent of women fleeing abuse in transitional housing programs was 42 percent compared to 53 percent in 1994. This in part is due to an increase in the availability of transitional housing for battered women.

There is a higher proportion of homeless women in Greater Minnesota fleeing abuse than in the Metro Area. In the Metro Area, 22 percent of women indicate they are fleeing abuse, compared to 37 percent of the women in Greater Minnesota.

In order to learn more about women fleeing abuse, separate analyses were conducted comparing women fleeing abuse with other women in our study. The analyses showed that, in a number of ways, women fleeing abuse are similar to other homeless women. For example, both groups are similar in age; level of educational attainment; length of time in Minnesota; use of food stamps, clothing shelves and emergency room services; receipt of Medical Assistance benefits and reported needs of children.

However, on many characteristics the two groups differ. The following tables compare the two groups of women. The first table shows the results for the overall female sample in 1994. The following two tables show the results for the Metro Area and Greater Minnesota for 1994. When results are examined separately for the Metro Area and Greater Minnesota, we find differences between those who are fleeing abuse and those who are homeless for other reasons.

p<u><</u>.05

These items are close to being statistically significant with p=.056

65

p≤01

Base n drops to n=70 for women fleeing abuse and n=106 for other women.

In the overall sample of homeless women, significant differences are found between women fleeing abuse and other homeless women. Specifically, women fleeing abuse are more likely than other homeless women to:

- be married at least once
- have stayed in a mental health hospital
- have children under 18 years old
- be physically abused as a child or youth
- be sexually abused as a child or youth
- have experienced violence in a relationship in the past 12 months
- have sought health care due to violence in the past 12 months

Women fleeing abuse were less likely than other homeless women to:

- be evicted from last housing
- · use hot meals programs

Controlling by geographic region (Metro vs. Greater Minnesota) we find differences that do not appear in the overall sample. Differences found between women fleeing abuse and other homeless women in the Metro Area are very similar to those found in the total sample, with a few significant differences. First, the same proportion in both groups have been married at least once. Second, women fleeing abuse are most ally than other homeless women to have problems obtaining child care when needed. Third, women fleeing abuse are less likely than other homeless women in the Metro Area to be receiving AFDC or GA.

Examining differences between the two groups of women (those fleeing abuse and other homeless women) in Greater Minnesota we find a number of significant differences. Specifically, in Greater Minnesota, women fleeing abuse are less likely than other homeless women to:

- be homeless for more than one year
- be admitted to a drug or alcohol treatment facility
- be unable to obtain child care when needed
- use hot meal programs
- consider themselves chemically dependent
- be admitted to detox

63

There are a few ways in which these two groups of homeless women differ regardless of geographic location. Overall, we would characterize women fleeing abuse as having experienced more victimization, both past and current; and to be less likely than other homeless women to experience eviction from previous housing.

### POTENTIAL BARRIERS TO EMPLOYMENT

Survey results show that unemployment is one of the most common problems among persons who are homeless. In fact, 12 percent of homeless men and 13 percent of homeless women report having a job that has lasted for three months or more.<sup>21</sup> Homelessness is clearly a substantial barrier to employment for those in the study population. But, there are other barriers as well.

The analysis presented here examines information from several survey items that have been identified by employment counselors as potential barriers to employment.<sup>22</sup> Barriers include the following:

- Transportation problems.
- Unable to afford child care.
- No high school diploma or GED.
- No job for one year or more.
- Physical health problems.
- Diagnosed with serious or persistent mental illness within last two years.
- Diagnosed with alcohol or drug abuse disorder within last two years or recent detox or chemical dependency treatment admission.
- In a correctional facility within last two years.

Employment counselors in the Wilder Day Reporting Program and the Employment Plus program identified all of the items used in this analysis as patential barriers to employment.

TU

The proportion of homeless men who have a job that has lasted three months or more has increased substantially, from 5 percent in 1991 to 12 percent in 1994.

The table below provides population estimates for persons living in Minnesota's temporary housing programs on October 27, 1994 regarding the presence of each of the potential employment barriers described above.

### Potential Barriers to Employment (Continued)

	Area			Program Type				
Potential Barrier	Total	Metro	Greater Minnesota	Emergency	Battered	Transitional	Street	
Diagnosed With Alcohol or Drug Abuse Disorder Within Last Two Years or Multiple Detox Admits or Chemical Dependency Treatment Admission								
Men & N Women & N	46.5 (588) 20.7 (250)	46.0 (470) 22.0 (209)	48.3 (118) 16.1 (41)	40.8 (359) 14.9 (63)	20.3 (23)	62.8 (126) 22.9 (142)	55.7 (103) 43.1 (22)	
In a Correctional Facility Within Last Two Years								
Men % N Women % N	13.8 (175) 6.0 (72)	13.3 (136) 6.0 (56)	16.1 (39) 6.1 (16)	12.8 .(113) 3.7 (15)	2.4	14.1 (28) 8.3 (52)	18.4 (34) 5.9 (3)	

The table shows that previous long term unemployment, alcohol problems, and mental health problem are the most frequently reported potential barriers to employment in the study population. Transportation problems, the lack of a high school diploma and recent incarceration are also reported by at least one in 10 respondents. Recent incarceration was reported more frequently by those in Greater Minnesota than by those in the metropolitan area. Child care is clearly a significant problem for women in this population.

We might expect to find differences in the amount and types of barriers that homeless persons in different temporary arrangements report. Although, we found no significant differences in the number of barriers across the different types of temporary living arrangements, (means ranging from 1.1 to 1.5), we did however, find many differences when examining specific barriers, controlling for gender.

-47- 72

### SIGNIFICANT DIFFERENCES FOR WOMEN BY SHELTER TYPE<sup>23</sup>

- Those in transitional housing are significantly more likely to report transportation problems.
- Many women report inability to afford child care as a barrier. However, women in battered
  women's and emergency shelters are more likely than women in other programs to report
  this problem.
- Women in emergency shelters were more likely than those in other shelter types to report no job for the last year.
- Women in transitional housing are considerably more likely than those in either emergency or battered women's shelters to have mental illness barriers.
- Significantly more women interviewed on the street report chemical dependency as a barrier to employment than those in all other locations.

### SIGNIFICANT DIFFERENCES FOR MEN BY SHELTER TYPE<sup>24</sup>

- Lack of education was significantly more likely to be a barrier to employment for men staying on the streets than men staying in other arrangements.
- Men in transitional housing were more likely to report mental illness than those in other living situations.
- Substantially more men in transitional housing and on the street report chemical dependency issues than those in emergency shelter.

Similarly, we found numerous differences between homeless men and women in the amount and types of barriers to employment they report.

### SIGNIFICANT DIFFERENCES BETWEEN MEN AND WOMEN

- Homeless women report more barriers to employment than homeless men.
- Women are more likely than men to report inability to afford child care and no job in the last year as barriers to employment.
- Men are more likely to have recent incarceration and chemical dependency as barriers to employment.

<sup>24</sup> Ibid.

73

All items listed are statistically significant at the p<.05 level.

The next table shows that approximately 23 percent of the men and 22 percent of the women have none of the listed employment barriers. The 1991 sample shows only 15 percent of men and 16 percent of women with none of these barriers to employment. In fact, half of all homeless adults interviewed have no more than one of the potential barriers described here compared to 39 percent in 1991. Nonetheless, 8 percent of the men and 12 percent of the women in 1994 have four or more of the potential barriers identified in this analysis.

A similar analysis by Peter Rossi in his book, <u>Down and Out in America</u>, examined individual problems related to unemployment, criminal records, mental illness and poor health.<sup>25</sup> The study conducted in 1987 found that fewer than 4 percent of Chicago's homeless had no problems at all to report and more than half had multiple problems.

The analysis of potential barriers to employment suggests that intervention efforts designed to help homeless people obtain jobs may work best when specifically targeted for persons who are the most amenable to change. For example, it may make sense to focus employment training efforts on those clients who are able to complete high school and prepare for employment and who do not have active chemical dependency or mental health problems. Similarly, young parents whose only significant barriers appear to be lack of education or job skills might benefit from affordable child care services designed to help them complete high school and prepare for employment. Transportation and/or child care needs are the only barriers experienced by some study participants.

### LONG TERM HOMELESSNESS

In order to better understand the characteristics of those who have been homeless for an extended period of time, a separate analysis was conducted comparing those who had been homeless for a year or more to those who had been homeless for less than 12 months. This analysis includes those staying in outdoor locations, emergency shelters and battered women's shelters but excludes transitional programs because of the extended length of service they provide (often up to two years). Some of the differences between these two segments of the population are shown in the following table.

Rossi, Peter, <u>Down and Out In America. The Origins of Homelessness.</u> (Chicago: University of Chicago Press, 1989) pp. 177-178.

-50-

	Me	en	Woi	nen
	Homeless 1 year or longer <u>N=370</u> Percent	Homeless less than 1 year <u>N=695</u> Percent	Homeless 1 year or longer <u>N=85</u> Percent	Homeless less than 1 year <u>N=501</u> Percent
Slept outdoors on night of survey	18.9	8.4	9.5	1.6
Reported that the last place they stayed was unsafe	21.6	10.7	20.8	6.5
Persons of color	51.4	72.2	67.1	77.7
Did not complete high school	51.2	34.4	55.3	38.6
Lived in MN less than one year	28.8	38.3	28.6	41.1
Lived in a foster home	21.2	8.4	28.6	14.0
Lived in a chemical dependency facility	47.5	36.0	35.8	15.3
Lived in a mental health facility	20.1	8.8	13.2	7.9
Lived in an orphanage	6.6	2.7	6.0	.8
Lists source of income as "asking for money on the street"	21.3	8.3	24.5	4.8
Uses drop-in centers	47.5	33.8	42.5	14.5
Military veteran	36.0	21.1	4.9	3.2
Reports having hepatitis	6.0	3.1	7.3	1.9
Reports major mental illness	28.4	15.8	31.4	21.5
Reports chronic alcohol use	60.1	40.4	36.2	17.8
Reports that he/she should be taking medications but does not	23.9	11.1	38.8	13.5
Received emergency room care in past 6 months.	30.0	25.0	53.6	36.0
Has quit a job because of mental health problems	29.7	13.7	31.4	13.4
Ever admitted to detox	51.6	30.5	23.9	7.5
Ever physically abused as child	31.4	20.4	42.3	32.7
Has sought health care in past year due to violent injury	17.5	7.8	36.9	21.7
More than 1 year since contact with family	32.0	19.4	15.9	7.1

The profile of those who have been homeless for a year or more is not surprising. Compared to those who have been homeless for less than a year, the long-term homeless are more likely to:

- sleep outdoors
- report unsafe conditions
- be white
- have less than a high school education
- be longer term residents of Minnesota
- have lived in foster homes, treatment facilities or orphanages
- ask for handouts from strangers
- use drop-in centers
- be military veterans
- have a major mental disorder
- report chronic alcohol use
- not take needed medications
- receive emergency room care
- quit a job because of mental health problems
- spend time in detox
- report abuse as a child or suffer violent injuries
- have no contact with family

Given this profile, the long term homeless are likely to be the most difficult to help and least likely to respond to general social service interventions. The fact that more than one-quarter of the men and close to one-third of the women report a major mental illness and more than one-half of the men and more than one-third of the women report chronic alcohol problems suggests that both state and county service systems for mentally ill and chemically dependent persons have some responsibility for meeting the needs of this segment of the homeless population.

<sub>-52-</sub> 77

#### KEY FINDINGS FROM THE STREET SAMPLE

One component of the statewide homeless survey focused on adults not staying in shelters. Two hundred and thirty-six adults were identified and interviewed as part of this effort; 170 in the Metro area and 66 in various locations in greater Minnesota. These locations are listed at the end of Appendix I.

While efforts were made to select diverse street locations and to have formerly homeless persons or outreach workers do most of the interviewing in order to increase the number of homeless persons who would be willing to talk with us, we do not know how representative our sample is of all non-sheltered homeless adults in Minnesota. The 1994 non-sheltered homeless adult sample differs in some ways from the 1991 sample. More non-sheltered persons were interviewed in the 1994 sample and this may in part be due to an increased effort to identify non-sheltered homeless adults than in the 1991 survey effort. However, it may also reflect an overall increase in the population of homeless persons. The sheltered homeless population in Minnesota has increased from 1991 to 1994. The number of non-sheltered homeless adults may have increased as well. Regardless of whether the non-sheltered homeless population has increased, the total number of such persons is unknown, but is undoubtably larger than this sample. The following descriptive information serves as a starting point for further study.

- The non-sheltered homeless have typically lived in Minnesota longer than those who stay in shelters. Three-fifths report that their last housing was in Minnesota, which decreased from two-thirds in 1991.
- Although, the majority of the non-sheltered homeless in 1994 are men (78%), more of the non-sheltered homeless in the 1994 sample are women compared to the 1991 sample (22% vs. 11%).
- American Indian people are often among the non-sheltered homeless, both in the metropolitan area as well as in greater Minnesota. In the 1994 street sample, native people constitute nearly one-third (31%) of those surveyed. There was a higher proportion of native persons in the 1991 street sample than in the 1994 sample (47% vs. 31%).
- Only 14 percent of the 1994 non-sheltered homeless adults were U.S. military veterans compared to 36 percent in the 1991 sample. There is about the same proportion of veterans in the sheltered and non-sheltered populations in 1994.

73

- The unsheltered homeless in greater Minnesota are more likely than those in the Metro area to report quitting a job because of mental health problems (35% vs. 21%). Unsheltered homeless women are more likely than unsheltered homeless men to have quit a job due to mental health problems (41% vs. 20%).
- Non-sheltered homeless persons tend to have less formal education than sheltered homeless persons. Forty-four percent have <u>not</u> completed high school or a GED.
- A higher proportion of the non-sheltered homeless are employed in 1994 compared to the proportion employed in 1991 (20% vs. 5%). Only one-third (31%) of the 1994 sample have not held a job for a year or more.
- Among those who do not use shelters, about half (45%) have been homeless for more than one year.
- In 1991 most non-sheltered homeless could not afford to pay more than \$100 per month for rent. In 1994 almost half (43%) can afford to pay \$200 or more per month for rent.
- Food stamps, medical assistance, free clothing shelves, food shelves, drop-in centers and hot meal programs are the programs most frequently used by the unsheltered homeless. Nearly two-fifths (38%) of those in greater Minnesota compared to about one-fifth (20%) in the Metro area say that they need assistance to apply or reapply for services.
- Forty-eight percent of the homeless who were not in shelters report having stayed in a correctional facility at some time in their lives. The proportion who have been in a correctional facility is higher for non-sheltered persons in greater Minnesota than for those in the Metro area (61% vs. 44%).

## PERSONS IN TEMPORARY HOUSING PROGRAMS (DATA TABLES FOR ALL SURVEY ITEMS)

- 1. Tables in this section contain weighted estimates for the population of persons residing in emergency shelters, battered women's shelters and transitional housing programs.<sup>26</sup> Information on persons in non-shelter locations is not weighted. (Weighting techniques are described in Appendix II.)
- 2. Each table provides breakdowns on the following variables: gender of respondent, shelter (or non-shelter) type, and metropolitan or greater Minnesota interview location. Special analyses of these data can also be provided on an "at cost" basis upon request.

In a very few shelter programs, interview data was not available and weights could not be computed. Therefore, the descriptive statistics that follow are based on population estimates that are slightly lower than the actual number of adults in residence on the day of the survey.

# APPENDIX II WEIGHTING TECHNIQUES

#### **WEIGHTING TECHNIQUES**

The 1994 survey data was weighted to reflect the actual number of homeless persons as indicated by the census counts of people in shelters throughout the state on October 27, 1994. Only sites from which there were completed interviews were used in the weighting. (There are census data available for all sites - see Appendix I.) The actual number of homeless persons on the street cannot be accurately estimated, so these cases were not weighted.

The weightings were calculated by a sample balancing program available in the Princeton Statistical Program (P-Stat). This technique uses an iterative approximation to the least squares adjustment of W.E. Deming (Statistical Adjustment of Data, New York: Wiley, 1943). This weighting procedure uses marginals (totals of control variables) to compute individual case weights. In order to obtain the highest possible accuracy, five so s of marginal were used. These were:

- 1) individual sites
- 2) sex (male, female)
- 3) region (NW, NE, Central, Metro, SW, SE)
- 4) shelter type (Emergency, Transitional, Battered Women's Shelter, Street)
- 5) shelter type within region by sex (all possible combinations of #2, #3 and #4 above)

The actual number of persons in the census is 2,471. The sample, however, is weighted to 2,470. This is because there were no completed interviews in a region/shelter type/sex combination where there should be a single case. Weights cannot be created for interviews that do not exist.

The weightings were used to estimate the characteristics of a homeless persons in Minnesota based on the sample of 1,323 interviews.

#### APPENDIX IV

FAMILIES SEEKING HOUSING ASSISTANCE FROM COMMUNITY ACTION PROGRAMS AND COMMUNITY ACTION COUNCILS OCTOBER 1994

#### FAMILIES SEEKING HOUSING ASSISTANCE FROM COMMUNITY ACTION PROGRAMS AND COMMUNITY ACTION COUNCILS OCTOBER 1994

The body of this report has focused on the characteristics of a sample of homeless adults in Minnesota. While it is difficult to estimate the total homeless population, this section attempts to identify housing issues among those who seek housing assistance from other sources; specifically, Minnesota's Community Action Agencies. This information can help shed light on the extent to which those in the general population find themselves in need of housing assistance.

The following findings were generated from data provided by Community Action Programs (CAP) and Community Action Councils (CAC) regarding the characteristics and types of services requested by those seeking housing assistance during October, 1994.

#### PERSONS SERVED

- 859 families sought help during October (1,110 adults and 1,327 children).
- The majority of those seeking help are women (66%).
- Adults ranged in age from 18 to 93; the average age is 34.
- The majority of those seeking assistance are white (75%).

#### **CURRENT HOUSING ARRANGEMENTS**

- The majority of those seeking assistance (60%) were in their own homes but needed some form of assistance to continue to stay there.
- · One-fourth were staying in a temporary arrangement with friends or family.
- Only 7 percent were residing in emergency shelter or safe homes.
- Persons in temporary living arrangements (friends/family or emergency) were more likely than those still living in their homes to be younger (29 vs. 37 years old) and persons of color (34% vs. 18%).
- Hispanic/Latinos are more likely to be in temporary arrangements than in emergency shelters (11% vs. 4%).

-289--289-

#### Types of Assistance Requested

- The majority of people sought financial assistance (66%).
- Over one-third needed assistance in finding affordable housing (38%).
- Persons in Greater Minnesota were more likely to receive financial assistance than those in the Metro area.
- Persons residing in their own homes were more likely to ask for financial assistance than those in temporary living arrangements.
- Five times as many persons in temporary living situations were seeking emergency shelter than those in their own housing.

#### **DISCUSSION**

The 859 families who sought housing assistance during October 1994 represent less than 1 percent of all Minnesota family households. Over one-quarter of those seeking housing assistance were without regular or permanent housing, and most of those in their own homes need assistance in order to stay there. Persons of color were more likely than whites to be in temporary living arrangements.

#### **IMPLICATIONS**

- 1) Financial assistance appears to be an essential element in the mix of services intended to reduce the risk of homelessness in Minnesota.
- 2) Helping families find affordable housing is also a necessary service, given the fact that 38 percent of people seeking assistance requested this type of help.
- 3) Providing referrals to emergency housing will continue to be an important service of CAP and CAC agencies.
- 4) The collection and analysis of this form of data for one year would provide a better assessment of the specific needs of people seeking assistance. It would also indicate which services are most needed, and offer better estimates of the total number of people seeking housing assistance and the total number of those who are doubled-up.

The 1990 Census reports 1.138.581 family households in Minnesota,

5) If October, 1994 represents a typical month in the number requests for housing assistance, this would represent approximately 10,000 families who would seek housing assistance in the course of a year.

#### ADDITIONAL DATA TABLES

The accompanying tables provide further breakdowns by regions within the state.
